

AX100 – Undriven curve – Type AXOKA

Area of application:

90° / 45° change of direction of transport. The direction of the goods towards the conveyor is maintained.

Technical data:

Operation:	Undriven roller conveyor curve with tapered rollers.
Framework:	Flat steel and square pipe.
Roller splits 90°:	10 rollers give roller split 115 mm at the inner span. 19 rollers give roller split 58 mm at the inner span
Roller splits 45°	5 rollers give roller split 122 mm at the inner span. 9 rollers give roller split 61 mm at the inner span
Roller type:	Ø50x1.5 mm, ball bearing with stainless steel shaft and conical segments in injection-moulded plastic.
Other:	A curve with conical rollers cannot be used as an inclined curve. If the curve is to slope, one of the gravitating curves, wheel curve AX100 type HJK or curve, undriven with split rollers, must be used.
